

As a graduate of the Technical University of Cluj-Napoca, Faculty of Construction, the following photos reflect my 20-year journey in the construction industry.

My message to the future generations, in this moment in time, would be:

*Those five years at the Technical University of Cluj-Napoca were more than academics for me — they were training for real life. I learned discipline, resilience, collaboration, and how to think technically and ask the right questions. But only after graduating did I understand what real work means: adapting fast, taking responsibility, and growing as a person, not just as a professional.*

*In the twenty years since, working in construction taught me to improve things a little every day — systems, communication, procedures. Continuous learning shaped me, and I hope it also influenced the people around me. Stepping out of my comfort zone built the confidence and calm I rely on today. If I've left a mark anywhere, I hope it's through personal example: knowledge and constant evolution.*

*Thank you,  
Paula*

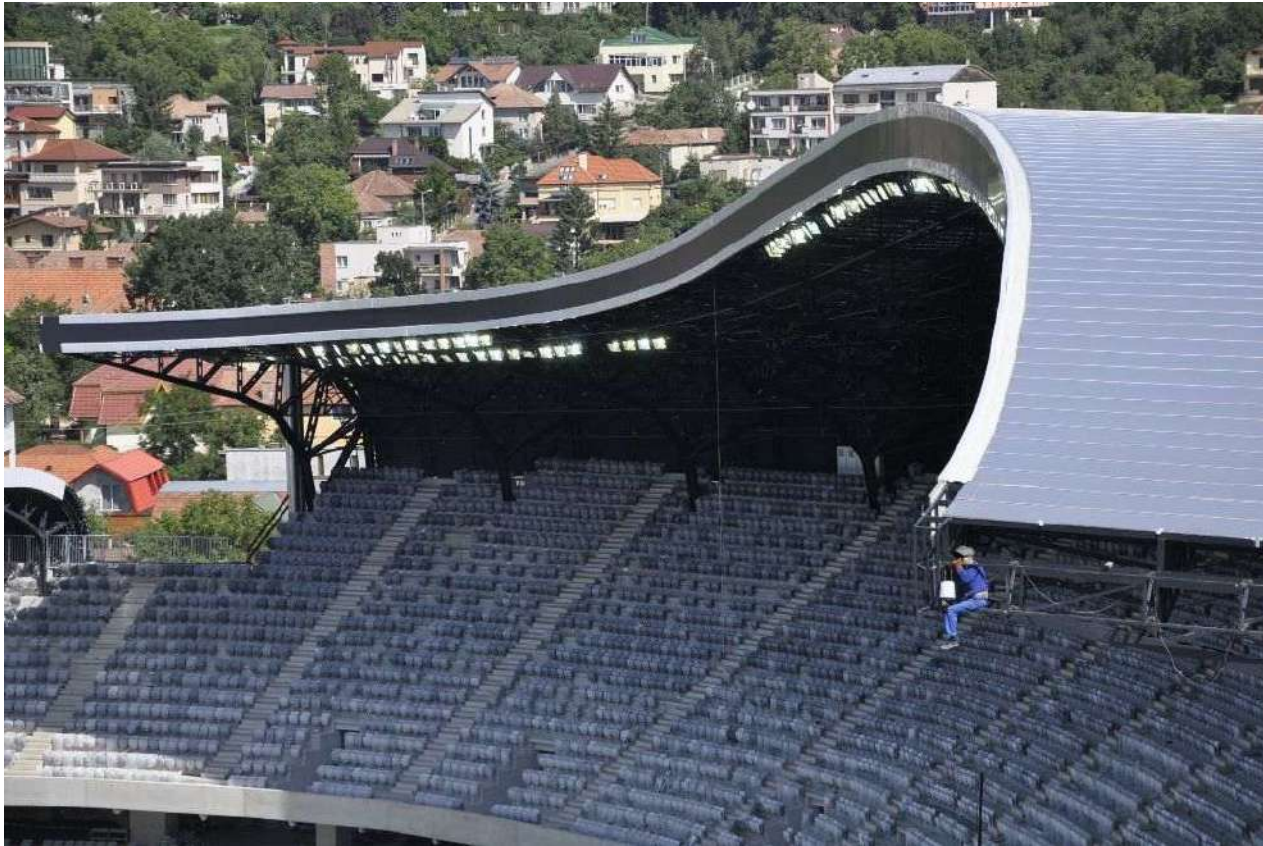

**2009-2011** – Cluj Stadium (BT Arena) – working for CON-A SRL, Romania, I was part of this project as an assistant project manager, taking the full project management role after one year.
